

SEA-GOD COLLECTION 2012

Enzo Palazzolo Sea-God Chairman

The tradition inspired technology, and the contemporary aesthetics are the guidelines that lead Sea-God to the creation of successful products. Sea-God is a clear example that the production of high-end watches still calls for a considerable percentage of craftsmanship that allows newcomer brands to be active and dynamic in the market.

Sea-God draws directly to the sea world adopting as its logo a traditional symbol, the trident, scepter of Poseidon, the Greek God of the sea. All of the watches in Sea-God collections can dive down to 300 meters. The release of "StormAbyss" will take Sea God watches even deeper to the darkest depths. The Sea-God world was created in 2003 by the entrepreneurial vision of Enzo Palazzolo, a perfectionist and determined Italian businessman, that has been showing a passion for fine watchmaking since the 80'.

Sea God watches made their official debut in 2010.

The ultimate aim of Sea-God is to create design products mixing traditional mechanics and precious stones to convey passion for the sea and for luxury.

The core of modern watchmaking creations are design, technology and passion. The creation of Sea-God products with mechanical tradition is guided by these principles . Sea-God shows elegance and originality like all the products making their debut in the luxury and innovation world. At the same time Sea-God offers a vision that honours the culture and tradition of the Swiss watch industry. Technology, aesthetics and the fine finishing added to the watch design are the components that distinguish a Sea-God product: objects with a refined aesthetics and a technological touch, designed for pleasure of the current and future generation of luxury sporting goods fans.
